Director E. Winer

Deputy Directors M. Irwin, I. Krop, K. Politi

Associate Directors T. Battaglia, B. Burtress, M. Dinan, E. Kaftan, M. King, P. LoRusso, F. Rogers, D. Stern

The center supports a \$105 million research base to promote translational research through collaborations between and within six basic, epidemiological, and clinical research programs. Basic research programs are Cancer Immunology; Cancer Signaling Networks; Genomics, Genetics, and Epigenetics; and DNA Damage and Genome Integrity. The Developmental Therapeutics research program integrates clinical research along with one epidemiological program, Cancer Prevention and Control. The center also supports eight shared facilities that are available for oncological research: Flow Cytometry, Irradiator, Rapid Case Ascertainment, Biostatistics Shared Resource, Yale Center for Genome Analysis, Precision Cancer Modeling, Yale Pathology Tissue Services, and Yale Center for Molecular Discovery.
